

# Make a Lithophane

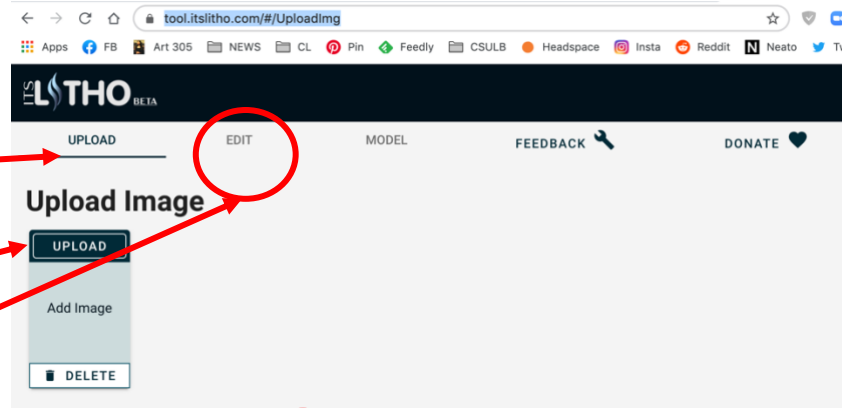

Go here:

<https://tool.itslitho.com/#/CreateModel>

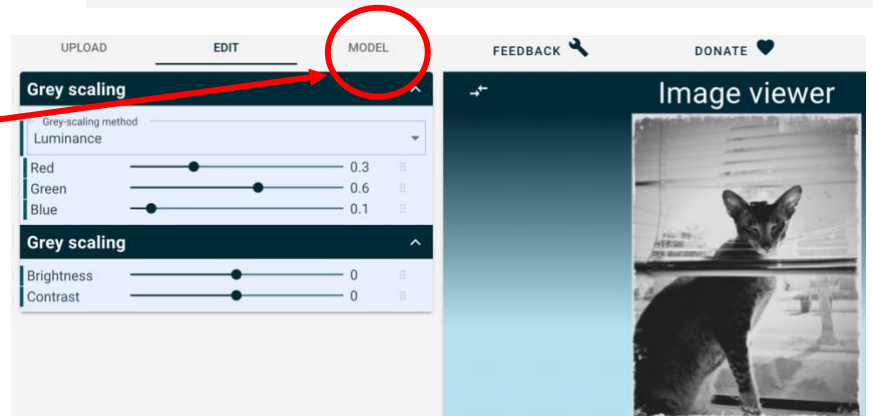

Click on upload

Upload your image. You can edit it first if you want, or just choose an image.

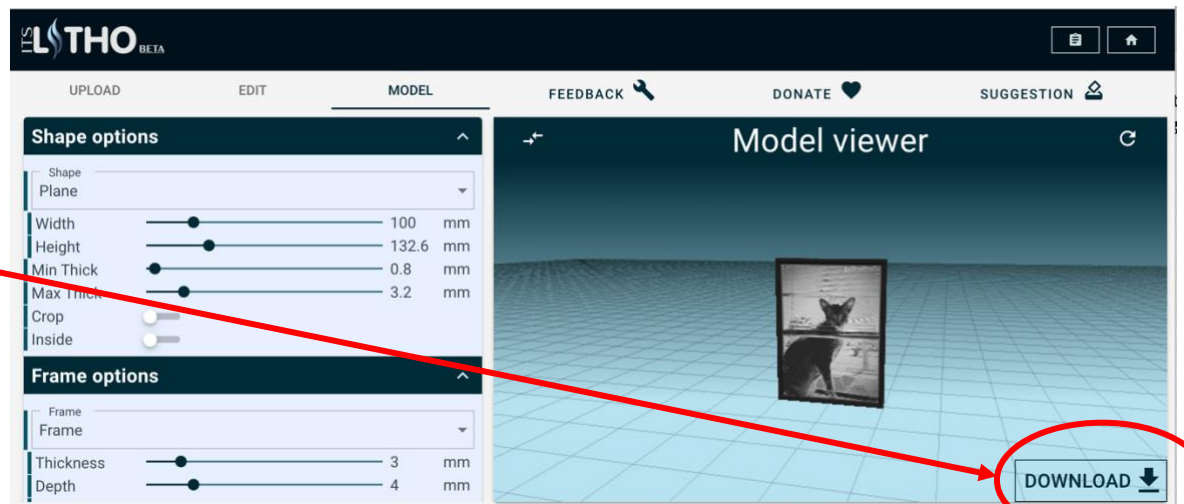

After you edit that: click on Edit

You can make adjustments here if needed, then click on Model

On this screen, make sure you keep the settings as is, then click Download

On the popup menu, choose Lithophane. It will then download the file and I can print it out! Put it in the dropbox marked "lithophane"
